From (Name) M. R. Ry Rao Bahadur N. Subba Rao Avargal,(Designation) President, District Board,

South Kanara.

To The Secretary to the Government of Madras,

Local Self Government Department.
Madras.

Sir,

With reference to G.O No. Mis.1913 P.H. dated 20th
 November 1923, I have the honour to submit herewith a copy
 of the District Health Officer's report on the sanitary arrange-
 -ments required at each of the places where fairs and festivals
 are held in this district.

2. The cost of the proposed arrangements, how that cost is to be
 met and the contribution, if any, to be demanded from the temple
 authorities are noted in the enclosed statement.

3. As suggested by the District Health Officer application
 will be made to Government for a grant from provincial funds
 for the conversion of the three existing wells into sanitary

Kans

Dis No 117/24

Office of the District Health Officer,
Mangalore, dated 11th March 1924.

From

M.R.Ry B.G.Prabhu Avargal, L.M. & S., B.S.Sc.,

District Health Officer,

South Kanara.

To

The President, District Board,

South Kanara.

Sir,

I have the honour to forward herewith my report dealing with the points required by G.O No. Mis.1913 P.H. dated 20th November 1923 for all the important fairs and festivals in this district.

1. Kulgunda cattle fair. The controlling authority for this is the District Board, 10000 people attend this fair for which 25000 head of cattle are brought for sale.

The following sanitary arrangements permanent or temporary are required.

The arrangements should be supervised by the District Health Officer, and one Health Inspector should be deputed to look to sanitation conservancy, water supply etc and one Sub Assistant Surgeon should be deputed to render medical aid. The three existing wells should be converted into sanitary type design wells and six new wells should be constructed. To prevent contamination from ^{dirty} buckets, separate ropes and buckets should be provided to each of the wells. 40 buckets and 40 ropes are required for this purpose. Iron chains may be bought in place of ropes. 4 maistries, 20 sweepers and 10 scavengers should be engaged for a fortnight. 10 trench latrines should be constructed on the sites to be pointed out by me. All the coffee hotels and eating houses should be brought under control by a licensing system. Fifteen temporary chattrams should be constructed. Quarters for the District Health Officer should be constructed on

the same design as that of an inspection shed. A similar but a little smaller building may be constructed for the use of the Health Inspector. Quarters for the four magistrates may be constructed on the following design:- 4 rooms each 10' x 10' x 12' high with a 4 feet verandah and 2 kitchens. Quarters for 30 scavengers may be constructed on the following design:- 6 rooms each 15' x 8' with two kitchens at either end 8 x 8' with a 4 feet verandah in front.

Three gas lights and fifty lights may be put up. One Circle Inspector of Police, one Sub Inspector and thirty constables will be necessary for the fair only. Two Veterinary Assistant Surgeons should be deputed.

As regards the cost for the temporary arrangements, the cost will be approximately Rs 180 which can be met from the collection of the toll fees and pindal fees.

As regards the proposals for conversion of three existing wells into sanitary type design wells and the construction of six more wells, estimates may be called for from the District Board--Engineer and the Government may be approached for a grant. As regards the permanent accommodation for myself, my Health Inspector and the Conservancy staff, estimates may be called for from the District Board Engineer and the cost may be met from the funds of the District Board.

2. Shasti festival at Subrahmanya. Eight thousand people attend this festival. The controlling authority for this is Uppinangady Taluk Board.

The following sanitary arrangements are required. The arrangements should be supervised by the District Health Officer. One Health Inspector should be deputed to look to sanitation, conservancy, water supply etc. One Assistant Surgeon should be deputed for the treatment of disease. All the wells should be hankinised. The river banks should be prevented from being polluted by posting constables along the banks of the river. A conservancy staff of one magistrate, 9 sweepers and 3 scavengers should be engaged for a period of 10 days. Nine latrines should be constructed, 5 for males and 4 for females. All the eating houses and coffee hotels should

be controlled by a licensing system. Seven chuttrums should be erected each 24' x 15' . One temporary dispensary should be erected and also 2 hospital wards each 15' x 12' and one plague shed and kitchen. 4 lbs of cresol and 5 lbs of potassium permanganate should be kept in stock with the Health Inspector. --- Thirty lights should be lit and one gas light should be put up for two nights. A police force of one Sub Inspector, 2 head constables and 20 constables should be requisitioned. The approximate cost for these arrangements will be about Rs 600 out of which Rs 300 might be levied from temple funds, Rs 50 might be realised from license fees and the rest may be met from the funds of the Taluk Board.

3. Illumination festival at Dharmastala. The controlling authority for this is the Uppinangady Taluk Board. It lasts for 4 days and 10000 people attend this festival. The sanitary arrangements should be supervised by the District Health Officer, provided the dates do not coincide with those of the Kulgunda fair, with the assistance of one Health Inspector. One Sub --- Assistant Surgeon should be deputed to render medical aid. --- Eight shallow wells and one tank should be chlorinated and separate buckets and ropes should be provided for these. A conservancy staff of eight sweepers should be engaged for 10 days and 4 scavengers for 5 days. These should be provided with 8 baskets, 8 brooms and 12 temporary dustbins should be put up. Ten trench latrines should be constructed, 5 for each sex and urinals consisting of pits 3 feet square and 5 feet deep with road metal up to a depth of 4 feet should be put up. --- free hotels should be kept up.

will have to be demanded from the temple funds.

4. Maka festival at Uppinangady. The festival lasts for 7 days on 3 different occasions in the course of a month. The controlling authority for this is Uppinangady Taluk Board. Six thousand people attend this festival. The arrangements will have to be supervised by the District Health Officer with the assistance of a Health Inspector. A conservancy staff of 6 sweepers and 4 scavengers should be engaged for 10 days. Three wells should be reserved for use by the pilgrims and these should be provided with separate ropes and buckets and the use of all other ropes and buckets forbidden. The river should be guarded from pollution. The lower portion should be reserved for bathing and the upper portion for drinking. Four temporary latrines should be constructed, two for each sex. All the eating houses and coffee hotels will have to be kept under strict sanitary supervision. Ten lights should be put up. Two lbs of potassium permanganate and 5 lbs of cresol should be stored with the Health Inspector. A police force of one Sub Inspector of police and 10 constables should be requisitioned. The cost of these arrangements will be about Rs 100 half of which should be demanded from the temple authorities.

5. Paryayya festival at Udipi. This festival is held ^{once} in two years and lasts for 12 days. Nearly 20000 people attend this festival. The controlling authority is the Udipi Taluk Board. The sanitary arrangements should be supervised by the District Health Officer with the assistance of 4 Health Inspectors. All the wells should be chlorinated and 4 public wells should be reserved for use by the pilgrims and separate buckets and ropes provided for the use of these wells and use of all other buckets and ropes forbidden. Twenty temporary --- ded latrines each 15' x 8' (10 for each sex) having their floor --- erly belled and covered with 5 inches of sand. ed sand
a constable 104
104

should be kept under strict sanitary supervision. Two quarantine sheds should be constructed. Six gallon of phenyle and 30 lbs of bleaching powder should be kept in stock. Thirty five additional police constables should be requisitioned for. The approximate cost for these arrangements is Rs 675 out of which one third should be demanded from the temple authorities and the rest met from Taluk Board funds.

6. Shasti festival at Kudupu. This lasts for 2 days and 5000 people attend this festival. The controlling authority is Mangalore Taluk Board. The sanitary arrangements should be supervised by the Health Inspector, Mangalore Range, as the District Health Officer, has to attend more important festival at Subramania. The source of water supply is at present only one tank which is in discriminate use for drinking, bathing and washing clothes, as the public well is far away from the temple. So it is highly desirable that a pucca sanitary type design well should be constructed just opposite to the temple. The estimate for this may be called for from the District Board Engineer and the Government may be approached for a grant. Till a public well is constructed, the tank will have to be chlorinated frequently and bathing and washing of the clothes in the tank should be forbidden. Eight water-men should be employed to distribute water during the festival. One sweeper should be employed 3 days before the festival and during the festival, one additional sweeper and one scavenger should be engaged. Two temporary trench latrines should be constructed one for males and one for females. All the temporary coffee hotels should be kept under strict sanitary supervision by a licensing system. One gallon of phen and 50 lbs of bleaching powder should be kept in stock. Such a large quantity of the latter will not be necessary if a public well is constructed as proposed by me. A police force of one head constable and eight constables -- should be requisitioned. The approximate cost for the temporary arrangements will be about Rs 90 half of which should be demanded from the temple funds.

~~Vanasiwarathi~~ festival at Kariangala. This festival lasts 6 days and nearly 3000 people attend this festival. The controlling authority for this is Mangalore Taluk Board. The sanitary arrangements will have to be supervised by the Health Inspector Puttur Range, as the District Health Officer has to attend the more important Waka festival at the same time. The sources of water supply are one big tank 200 yards long x 50 yards broad x 40 feet deep and two public wells. The tank should be guarded against pollution and the wells should be hankinised. A staff of 2 sweepers and 2 scavengers should be engaged for 4 days. Two temporary trench latrines should be constructed, one for males and one for females. The Medical Officer, Buntwal should be deputed for one day, the Mahasivarathri day, for the treatment of disease. 2 lbs cresol and 5 lbs of potassium ~~potassium~~ permanganate should be stored with the Health Inspector. Two gas lights should be lit on Mahasivarathri night. The approximate cost for these arrangements is Rs 40, half of which may be levied from the temple authorities.

8. Polali jatra at Kariangala. This festival lasts for 6 days -- and nearly 6000 people attend this festival. The controlling authority is Mangalore Taluk Board. The sanitary arrangements will have to be supervised by the District Health Officer with the assistance of one Health Inspector. One Sub Assistant Surgeon should be deputed for the treatment of disease. The chief sources of water supply are private wells. So at least one public well should be constructed just in front of the temple. The estimate for this may be called for from the District Board Engineer and the Government may be approached -- for a grant. All the private wells should be ~~hank~~ hankinised and 2 wells should be reserved for the use of the pilgrims and separate buckets and ropes provided for these and two coolies should be engaged to supply drinking water to the pilgrims. A conservancy staff of 4 sweepers and 2 scavengers should be engaged for 8 days. Four trench latrines should be constructed, two for males and two for females. All the eating houses and coffee hotels should be kept under strict sanitary supervision by a licensing system. A fee of Rupee one ---

should be levied of potassium permanganate and 5 lbs of cresol should be kept in stock with the Health Officer. One gas light should be lit for three nights. The approximate cost of these temporary arrangements will be Rs 60, Rs 20 may be met from Taluk Board funds, Rs 20 may be realised from stall fees and Rs 20 may be demanded from the temple authorities.

9. Vakara Sakramana festival at Marnakatte.:- This festival lasts for 3 days and nearly 6000 people attend this festival. The controlling authority is Coondapoor Taluk Board. The sanitary arrangements will be supervised by the Health Inspector, Coondapoor Range, as the District Health Officer has to attend the more important festival at Udipi. One Sub Assistant Surgeon should be deputed to render medical aid. At present the river is the chief source of drinking water supply and measures should be taken to conserve the upper portion for drinking, the next portion for washing, cooking utensils and the next for bathing and washing clothes. Measures should be taken to prevent the banks of the river from being polluted. At least three sanitary type design wells should be constructed so that wholesome supply of drinking water may be available. I understand that the temple derives a large income from the festival and so the temple authorities may be induced to bear the cost of constructing these wells. A staff of 6 sweepers and 2 scavengers should be engaged for a period of one week. Four trench latrines-- each 15' x 8' each having a trench right through the length of the latrine on one side ~~and~~ not more than ten inches wide and 2 feet deep should be constructed, 2 for males and 2 for females. All the eating houses and coffee hotels should be kept under strict sanitary supervision by a licensing system. An isolation shed should be constructed 20' x 8' with bamboo staves and roofing. 2 lbs of --- potassium permanganate and 5 lbs of cresol should be stocked with the Health Inspector. One Sub Inspector of Police and 12 constables should be requisitioned for. At least 10 temporary lights should be put up. The cost of these temporary arrangements will be about Rs 100 half of which may be demanded from the temple authorities.

The festival at Shankernarai¹ / days and nearly 2000 people attend this festival. The authority is Coondapoor Taluk Board. The sanitary arrangements will be supervised by a Health Inspector. The sources of water supply are two public wells and many private wells. These should be hankinised. A staff of 2 sweepers and one scavenger should be engaged for 5 days. Two trench latrines should be constructed one for the males and one for the females. 4 lbs of potassium permanganate and 5 lbs of cresol should be kept in stock with the Health Inspector. No lighting arrangements are necessary as these are moonlight nights. Fees should be levied on temporary shops put up in poramboke lands. The approximate cost of these temporary arrangements is about Rs 25, at least half of which can be realised from the pandal fees. No contribution need be demanded from temple authorities.

11. The festival at Kollur lasts for 9 days and nearly 2000 people attend this festival. The controlling authority is Coondapoor Taluk Board. The sanitary arrangements will be supervised by the District Health Officer with the assistance of one Health Inspector. One Sub Assistant Surgeon should be deputed to render medical aid. The chief sources of drinking water are private wells and river water. All the private wells should be hankinised and the river water should be guarded against pollution by posting constables along the banks and arrangements made to reserve the upper portion for drinking, the middle portion for washing, cooking utensils and the lower most portion for washing clothes and bathing. A staff of 3 sweepers and 3 scavengers should be engaged for 10 days. Two trench latrines should be constructed, one for males and one for females. All the eating houses and coffee hotels should be kept under strict sanitary supervision. Two temporary sheds 20' x 6' should be erected for the use of the pilgrims. An isolation shed 20' x 8' should be constructed with bamboo batties. 2 lbs of cresol and 5 lbs of potassium permanganate should be kept in stock with the Health Inspector. At least six constables are necessary exclusively for sanitary arrangements. The total cost of these arrangements is approximately Rs 100 at least half of

which should be demanded from temple authorities.

12. The car-festival at Koteswar lasts for 5 days and nearly 5000 people attend this festival. The controlling authority is Coondapoor Taluk Board. The sanitary arrangements should be supervised by the District Health Officer with the assistance of one Health Inspector. The chief sources of water supply are one public well and many private wells. These should be hankinised. A conservancy staff of 4 sweepers and 2 scavengers should be engaged for a period of one week. Two trench latrines should be constructed, one for males and the other for females. A police force of one Sub Inspector of Police and six constables should be requisitioned for. All the eating houses and coffee hotels should be kept under strict sanitary supervision. 2 lbs of cresol and 5 lbs of potassium permanganate should be kept in stock with the Health Inspector. The total cost of these arrangements is approximately Rs 35. At least Rs 10 can be realised from license fees for temporary stalls. No contribution need be levied from temple ----- authorities.

R.C. No. 2594-2/P.H.,

Station..... Madras, Dated the 7th May 1924.

From (Name) Dr. K.T. Matthew, D.Hy., D.P.H. (Cantab),

(Designation) Ag. Director of Public Health.

To The Secretary to the Government of Madras,

Local Self-Government (Public Health) Department.

Sir,

Reference:- Your memo No. 11033-1/P.H., dated 20-4-24
 regarding festivals in South Kanara District.

I beg to make the following remarks:-

1. Kulgunda Cattle Fair - The suggestions of the District Health Officer are strongly ~~and~~ recommended. 5 more scavengers however should be employed, and there should be ten pairs of trench latrines. At the last celebration much confusion was caused by a/tering notice the date of the cattle fair - earlier than the advertised date to avoid this on the next

Wm's
 11/5/24

2. Shasti festival at Subramania. - The provision for latrine accommodation and staff is adequate. There should be 8 pairs of latrines with 8 scavengers in attendance and 4 more scavengers for conserving other areas where nuisance may be committed.

3. Illumination Festival at Dharmastala - The latrine accommodation and staff are insufficient. There should be ten pairs of latrines and ten scavengers in attendance, with five additional scavengers for conserving the festival site.

4. Maka Festival at Uppinangadi - As the festival continues for nearly a month more provision should be made for latrines and staff. There should be 6 pairs of latrines and 6 scavengers to attend them, with 3 additional scavengers for other conservancy duties in festival site.

5. Paryaya Festival at Udupi - Here again sanitary arrangements are inadequate. There should be 20 pairs of latrines with 20 scavengers, and 10 more scavengers for picking up night-soil in the festival site.

6. Shasti Festival at Kudupu - Sanitary arrangements are inadequate. There should be five pairs of latrines, with five scavengers in attendance, and two more scavengers should be employed in picking up night-soil in the festival site.

7. Mahasivarathri festival at Karanje - There should be three pairs of latrines and 3 scavengers to attend them, with one additional scavenger for picking up night-soil in the festival area.

8. Rolali Jatra at Kariangala - There should be six pairs of latrines attended by six scavengers, with 3 additional scavengers for conservancy duties in the festival site.

9. Makara Sakramana festival at Marnakatte - There should be six pairs of latrines attended by six scavengers, with three additional scavengers for scavenging duties in the festival site.

Festival at Shankernaraina - There should be two pairs attended by two scavengers with one additional scavenger for scavenging duties in the festival centre.

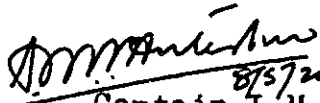

11. Festival at Kollur - Two pairs of trench latrines should be erected, the scavenging staff proposed is sufficient.

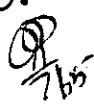

12. Car festival at Koteswar - There should be five pairs of latrines with five scavengers in attendance, and two more scavengers for conservancy duties in the festival site.

From the above it will be gathered that the arrangements proposed by the District Health Officer - except the sanitary arrangements - are adequate and it is strongly recommended that they be carried out in full. Special stress has been laid on the necessity for the conversion of step wells into type design draw wells, and on the necessity of constructing new wells when the supply is only to be obtained from an unsafe river. The need for special police for sanitary purposes is also felt and should be met when the festivals are celebrated.

In every case sanitary arrangements proposed are inadequate. In this connection, I cannot too strongly recommend and draw the attention of the sanitary department, and that of the Presidents of District and Taluk Boards and Municipalities, to the very modest scales laid down in G.O.No. 1722 PH d/13.12.22

S.K.V. 7-5.

OFFICE NOTE.

SUBJECT. *Social arrangements - fairs and festivals - S. Kanava Dt.*

From *The P. D. B. S. Kanava*

Register No. *3517 of 8.4.24*

With reference to para 7 of fo. 1723 P. B. of 13.12.22 the P. D. of the S. Kanava Dt. Board submitted a report in 1923 & in it he stated that the Convening of a Conference for Constituting a Committee for the management of the various fairs and festivals taking place in the district ^{was not necessary.} The D. P. B. however did not agree with the P. D. & remarked "that such places as 'vial places of pilgrimage as depicted and which can be managed only by a Joint Committee consisting of the District Board, Dt. Board & the Temple Authorities." These remarks were communicated to the P. D. for necessary action - vide fo. 1913 P. B. of 20.11.23. In his present letter the P. D. has not stated whether the ^{any} Conference was continued with reference to the

for : nor is there anything to show whether
the order was considered by the D.T. Board
with reference to ^{the 30th} ~~the 30th~~ of the D. B. Act 1920

The D.P. B. however
does not press this
point now.

2 There are a dozen festivals reported
to take place in the District. It is observed
that out of these 12 festivals the cost of the
sacring arrangements in connection
with 9 of them is proposed to be met by the
local board ^{and temple authorities} / concerned : in the proportion
of ~~one-half~~ ^{one-third} while that
of the remaining 3 festivals is proposed
to be met entirely by the local
board & concerned. Under section

128 of the D. B. Act 1920 the sanction
of the Govt is necessary for the levy of
Contributions from temple authorities. The
P.R. of the T. Kanam D. B. has been
asked to address Govt separately for
such sanction wherever necessary
with copies of the resolutions of the
local board concerned after consulting
the temple authorities in each case.

3 The D.P. B. now states "that the arrange-
ments proposed by the D.P.B. - except the
"sacring arrangements - are adequate"
and strongly recommended them for
adoption. He remarks that the sacring
arrangements proposed for each festival

are inadvisable. The ^{Cont may agree with the} new works of the
 D.P. Co. & they may be even be initiated
 to the P.A. 14

4 The Pt. proposes to apply to the Govt
 for grant for the ^{Construction of 6 new wells for the} Contention of three existing
 wells into sanitary type design wells. No
 grant is advisable for sanitary works
 of the kind.

A draft order is submitted for
 approval
